

## BirdCare

An innovative high-rise glazing solution for protecting birds in urban environments.

Reflective glass facades have rendered urban developments virtually invisible for birds causing up to 1 billion bird deaths annually in North America.

**BirdCare** is our informed response designed to keep birds safe thanks to the use of a discrete dot pattern tested for many years in large cities. **BirdCare** not only succeeds in that regard, but our innovative production method allows the pattern to be applied on the surface 1 providing the market with a unique solution that rises to the challenges of actual regulation.

- Markers on the external surface 1.
- For both tempered and non-tempered glass surfaces.
- Perfect vertical and horizontal pattern alignment.
- A large range of Low-E glass options to choose from.
- Maximises building envelope performance.

# BirdCare

## Markers on the external surface 1.

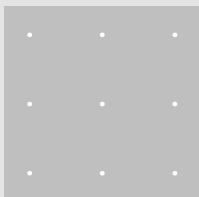

Our production method allows the pattern to be applied on the surface 1 making the product compliant with actual regulation.

## For both tempered and non-tempered glass surfaces.

Flexible and cost-efficient solution.

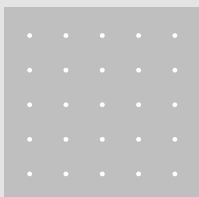

## Perfect vertical and horizontal pattern alignment.

**BirdCare** patterns are applied to finished sealed units, allowing for a perfect horizontal and vertical alignment on adjacent units.

## Multiple Low-E glass options.

We're able to offer a large range of Low-E glass options to choose from.

## Maximises building envelope performance.

Pattern applied to surface 1 fully preserves the Low-E glazing effectiveness in building performance.
