

SEALED UNITS

Laurier Architectural offers a vast range of energy efficient glass, high quality interlayers and multiple options to customize insulating glazing.

All sealed units are double sealed, made in a professional manner using a sealer robot.

MANUFACTURER'S ENVIRONMENTAL MANAGEMENT PROGRAM

MANUFACTURER'S COMMITMENT

The safety of our workforce and environment protection are top priority for Laurier Architectural.

We make sure our workers work in a safe and healthy work environment and have access to the necessary protective equipment. Work procedures are set up to ensure that work is performed safely.

We strive to reduce our environmental footprint by offering a selection of energy-efficient and environmentally friendly products, through sound resource management and a waste recycling program:

- We use the heat of our tempering furnaces to heat the inside of the plant.
- We have a closed circuit water filtration and recycling system that reduces our water consumption.
- Rather than sending our glass waste to the landfill, it is picked up by an external supplier for use as raw material in the manufacturing of their products.
- We use lead-free inks in the coatings of our products.
